Testing Python Code

DocTest

فحص واختبار برمجيات بايثون

By:

Hussam Hourani

V1.0 -NOV 2019

Agenda

- DocTest Example

What is doctest

doctest is a test framework that comes prepackaged with Python.

The doctest module searches for pieces of text that look like interactive Python sessions inside of the documentation parts of a module, and then executes (or reexecutes) the commands of those sessions to verify that they work exactly as shown, i.e. that the same results can be achieved

```
pip install doctest
```

DocTest Rules

Example

'''

Module showing how doctests can be included with source code

Each '>>>' line is run as if in a python shell, and counts as a test.

The next line, if not '>>>' is the expected output of the previous line.

If anything doesn't match exactly (including trailing spaces), the test fails.

'''

```
1 import doctest
2
3 def sum(a,b):
4     """
5     Calculates the sum of a and b
6
7     >>> sum(1,1)
8     2
9     >>> sum(1,-1)
10    0
11    >>> sum(-1,-1)
12    -2
13    >>> sum(0,-10)
14    -10
15    >>>
16
17    """
18
19    return a+b
20
21 if __name__ == "__main__":
22     doctest.testmod()
```

Doc Testing example

```
1 import doctest
2
3 def sum(a,b):
4     """
5     Calculates the sum of a and b
6
7     >>> sum(1,1)
8     2
9     >>> sum(1,-1)
10    0
11    >>> sum(-1,-1)
12    -2
13    >>> sum(0,-10)
14    -10
15    >>>
16
17    """
18
19    return a + b
20
21 if __name__ == "__main__":
22     doctest.testmod()
```

Output

In [33]: runfile('C:/Python36/Mystuff/doctest_1.py', wdir='C:/Python36/Mystuff')

In [34]:

Doc Testing – Pass Results

```
1 import doctest
2
3 def sum(a,b):
4     """
5     Calculates the sum of a and b
6
7     >>> sum(1,1)
8     2
9     >>> sum(1,-1)
10    0
11    >>> sum(-1,-1)
12    -2
13    >>> sum(0,-10)
14    -10
15    >>>
16
17    """
18
19    return a+b
20
21 if __name__ == "__main__":
22     doctest.testmod()
```

python -m doctest -v doctest_1.py

Output

Command Prompt

```
C:\Python36\Mystuff> python -m doctest -v doctest_0.py
Trying:
    sum(1,1)
Expecting:
    2
ok
Trying:
    sum(1,-1)
Expecting:
    0
ok
Trying:
    sum(-1,-1)
Expecting:
    -2
ok
Trying:
    sum(0,-10)
Expecting:
    -10
ok
1 items had no tests:
    doctest_0
1 items passed all tests:
   4 tests in doctest_0.sum
4 tests in 2 items.
4 passed and 0 failed.
Test passed.

C:\Python36\Mystuff>
```

Doctest fails

Output

```
1 import doctest
2
3 def sum(a,b):
4     """
5     Calculates the sum of a and b
6
7     >>> sum(1,1)
8     2
9     >>> sum(1,-1)
10    0
11    >>> sum(-1,-1)
12    -2
13    >>> sum(0,-10)
14    -10
15    >>>
16
17    """
18
19    return a - b
20
21 if __name__ == "__main__":
22     doctest.testmod()
```

```
Command Prompt
